

...Caregivers.....

How you can help

- Don't forget oral health. Teeth must be brushed twice a day and dentures cleaned daily.
- Check your client's mouth after every meal for leftover food.
- Be mindful that it may feel strange for your client to receive oral care.
- Use a "Tell-Show-Do" approach. Tell your client what you will do. Show them. Do what you said.
- Encourage regular dental visits. Tell the dentist of any changes you notice such as redness, swelling or smell.
- Ensure that your client drinks water throughout the day.

How do I access dental care?

- Visit your private dentist or contact your health fund
Find a dentist: <https://www.ada.org.au/Find-a-Dentist>
- Contact your local public health clinic to see if you are eligible

Stroke & Oral Health

Taking care of your teeth and gums is important after a stroke

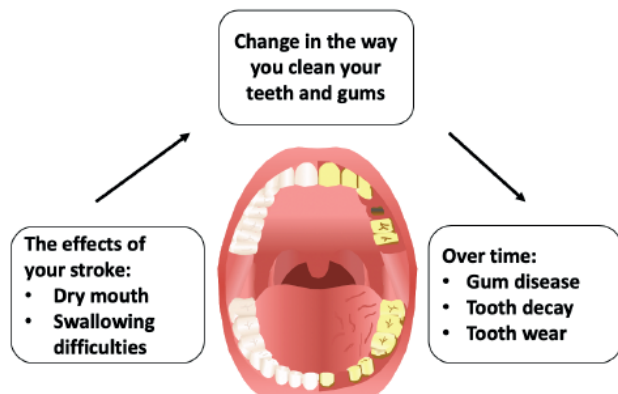

... Effects of Stroke ...

The effects of stroke can impact your ability to clean your teeth and gums.

- Makes it harder to brush your teeth properly.
- Leads to a build-up of leftover food in your mouth.
- Increases the amount of acid that stays in your mouth.
- Can lead to tooth decay and gum disease.

... Getting Help ...

Speak to any health care provider about your oral health concerns. If this is not your dental practitioner, this could be your:

- GP
- physio
- speech pathologist

Ask them to refer you to a dentist close to your home. Speaking up is the best way to address any oral health concern.

**A healthy mouth makes you
FEEL and LOOK good!**

A Healthy Mouth

Improves:

- sensation in your mouth
- your speech
- your general health

Decreases your risk of:

- pneumonia
- gum disease and tooth decay

... Tips ...

**Patients on modified diets should always
follow advice from their speech pathologist**
